The Father Factor*

Father Factor in Poverty

Children in father-absent homes are almost four times more likely to be poor.

Father Factor in Child Health

High-quality interaction by any type of father predicts better infant health.

Father Factor in Incarceration

Even after controlling for income, youths in father-absent households still had significantly higher odds of incarceration than those in mother-father families.

Father Factor in Teen Pregnancy

Being raised by a single mother raises the risk of teen pregnancy, marrying with less than a high school degree, and forming a marriage where both partners have less than a high school degree.

Father Factor in Child Abuse

A study using data from the Fragile Families and Child Wellbeing Study revealed that in many cases the absence of a biological father contributes to increased risk of child maltreatment. In families with a non-biological (social) father figure, there is a higher risk of abuse and neglect to children, despite the social father living in the household or only dating the mother.

Father Factor in Drug Abuse

In a study of 6,500 children from the ADDHEALTH database, father closeness was negatively correlated with the number of a child's friends who smoke, drink, and smoke marijuana.

Father Factor in Childhood Obesity

The National Longitudinal Survey of Youth found that obese children are more likely to live in father-absent homes than are non-obese children.

Father Factor in Education

Father involvement in schools is associated with the higher likelihood of a student getting mostly A's. This was true for fathers in biological parent families, for stepfathers, and for fathers heading single-parent families.
